

Getting Started with Cimply

Writing sample — Cimply is a demonstration scheduling product for creative studios, built to showcase documentation skills. Not a live commercial product.

Welcome

Cimply replaces the Google Calendar + Slack thread + spreadsheet routine most small creative studios use to track who's working on what. Every job lives in one order so nobody has to ask “where are we on that logo?” ever again.

This guide gets you from sign-in to your first completed order in about ten minutes.

Before You Start

Cimply has two roles:

- Scheduler: creates and assigns orders, manages the team's workload. (Studios can have more than one.)
- Designer: receives orders, does the work, logs time.

An admin sets your role when you're invited. If you're not sure which one you are, check with whoever set up your studio's account.

Step 1: Log In

Sign in with the email and password from your invite. You'll land on your dashboard:

- Schedulers will see every order on the account.
- Designers will see their own orders.

Cimply notifies you in-app any time a Status changes or a new message lands on one of your orders. That's your cue to check back. Email only triggers once, when a Designer is first assigned an order.

Step 2A: Schedulers — Create an Order

Select New Order and fill in the required title, short description of the work, estimated time, and a scheduled start and end date/time. Assigning a Designer is optional here:

- Leave it unassigned and save — the order sits in New status until you assign a Designer later.
- Assign someone now and save — the order moves straight to Assigned status, and your Designer gets an email with the details and a direct link within a few minutes.

Step 2B: Designers — Accept Your Order

Check your dashboard for a list of your open Orders. Open the order to see the full brief. When you're ready to begin, change the Status to In Progress to signal to the scheduler that work is underway.

Step 3: Communicate Inside the Order

Questions about the work go in that order, not a side channel.

- If you're a Designer and something's unclear, leave a note and change the Status to ‘On Hold’.
- If you're a scheduler, open orders ‘On Hold’ to answer questions and then change the Status back to ‘In Progress’.
- Steps above can repeat as needed.

This keeps the context attached to the job instead of buried in a chat history nobody can find later.

Step 4: Complete the Order

When the work is done, the Designer logs actual hours on the order and changes the Status to 'Needs Review'. That tells the scheduler to review and then set Status to 'Complete'. Once it's Complete, the brief and time record lock in as a finished record — the message thread stays open, though, so either of you can still post follow-up notes.

What's Next

That's the full loop: create, assign, work, communicate, log time, complete. For everything else — reassigning orders, cancelling, filtering your dashboard, and what each status means — see the full Cimplify User Guide: [Managing Orders](#).
