

Cimply — Order Status Test Cases

Writing sample — test cases derived from the Cimply PRD and API Reference, authored prior to implementation. Cimply is a demonstration product built to showcase documentation skills; it is not a live commercial product.

Test Case ID	Title	Preconditions	Test Steps	Expected Result	Priority
TC-01	Order defaults to New when created unassigned	Scheduler is authenticated.	1. Scheduler creates a new order without a designer_id.	Order is created with status type new.	High
TC-02	Order defaults to Assigned when created with a Designer	Scheduler is authenticated; target Designer is Active.	1. Scheduler creates a new order with designer_id set to an Active Designer.	Order is created with status type assigned; the Designer receives an assignment email within a few minutes.	High
TC-03	Designer moves own order to In Progress	Order status type is assigned; order is assigned to the Designer.	1. Designer sets the order's status to in_progress.	Status changes to in_progress.	High
TC-04	Designer moves order to On Hold	Order status type is in_progress; order is assigned to the Designer.	1. Designer sets the order's status to hold.	Status changes to hold.	Medium
TC-05	Designer moves order to Needs Review	Order status type is in_progress or hold; order is assigned to the Designer.	1. Designer sets the order's status to submitted.	Status changes to submitted.	High
TC-06	Designer cannot move order to Complete	Order status type is submitted; order is assigned to the Designer.	1. Designer attempts to set the order's status to complete.	Request is rejected (forbidden_status_transition); status is unchanged.	High
TC-07	Designer cannot move order to Cancelled	Order status type is in_progress; order is assigned to the Designer.	1. Designer attempts to set the order's status to cancelled.	Request is rejected (forbidden_status_transition); status is unchanged.	Medium
TC-08	Order cannot skip directly from New to Complete	Order status type is new and unassigned.	1. Scheduler attempts to set the order's status to complete.	Request is rejected (invalid_status_transition) because the target type is not reachable from new; status is unchanged.	High
TC-09	Complete is blocked without a logged time entry	Order status type is submitted; no time entries have been logged.	1. Scheduler attempts to set the order's status to complete.	Request is rejected (time_entry_required); status is unchanged.	High
TC-10	Order completes successfully after time is logged	Order status type is submitted; the Designer has logged at least one time entry.	1. Scheduler sets the order's status to complete.	Status changes to complete; the order's fields and status lock; the message thread remains open.	High
TC-11	Status cannot be changed on a terminal order	Order status type is complete (or cancelled).	1. Scheduler attempts to set the order's status to any other type.	Request is rejected because the current status is terminal and locked; status is unchanged.	High
TC-12	Non-terminal order can be cancelled directly	Order status type is hold (or any non-terminal type).	1. Scheduler sets the order's status to cancelled.	Status changes to cancelled; the order's fields lock; the message thread remains open.	Medium
